

BEARINGS FOR THE + AGRICULTURAL INDUSTRY

Partnership based on trust – and trust based on quality

As one of the world’s leading manufacturers of rolling bearings, linear technology components and steering systems, we can be found on almost every continent – with production facilities, sales offices and technology centres – because our customers appreciate short decision-making channels, prompt deliveries and local service.

The NSK company

NSK commenced operations as the first Japanese manufacturer of rolling bearings back in 1916. Ever since, we have been continuously expanding and improving not only our product portfolio but also our range of services for various industrial sectors. In this context, we develop technologies in the fields of rolling bearings, linear systems, components for the automotive industry and mechatronic systems. Our research and production facilities in Europe, Americas and Asia are linked together in a global technology

network. Here we concentrate not only on the development of new technologies, but also on the continuous optimisation of quality – at every process stage.

Among other things, our research activities include product design, simulation applications using a variety of analytical systems and the development of different steels and lubricants for rolling bearings.

Total Quality by NSK: The synergies of our global network of NSK Technology Centres. Just one example of how we meet our requirements for high quality.

NSK is one of the leading companies with a long tradition in patent applications for machine parts. In our worldwide research centres, we not only concentrate on the development of new technologies, but also on the continual improvement

of quality based on the integrated technology platform of tribology, material technology, analysis and mechatronics. **More about NSK at www.nskeurope.com or call us on +44 (0) 1636 605 123**

Agri Disc Hub bearing units

Agricultural applications present considerable challenges for all mechanical components. Contamination, moisture, vibration and shock loads are just some of the factors which these components have to cope with. As one of the world's leading bearing manufacturers, NSK has risen to this challenge. In addition to a wide range of standard components, the company is highly flexible when it comes to developing special, customised solutions for its customers. NSK's Neuweg production site in Munderkingen, Germany, in particular specialises in bespoke solutions of this kind. Established in 1954, Neuweg has a tradition of manufacturing bearings, primarily for agricultural machinery. Neuweg became part of the NSK Group in 1990. Staff at the site now develop NSK, RHP and NWG (Neuweg) branded products and produce them in line with NSK's premium standards of quality.

The NSK Agri Disc Hub bearing units use double-row angular-contact ball bearings which are capable of accommodating heavy radial and axial loads. The units are screwed straight onto the discs, with an O-ring set into the bearing housing (**figure 2**) protecting the bearing from contamination and moisture on this side.

On the arm side of the unit, the bearing is protected by a cassette seal developed specially for this use (**figure 1**). This seal has successfully withstood extensive testing and can even handle tough operating conditions like the use of liquid manure.

In addition to this, the cassette seal prevents moisture and water from getting into the unit, even if the machine is cleaned with pressure washers after use (**figure 3**). The bearings are also protected by a DDU seal. This stops lubricant from escaping, ensuring maintenance-free running.

The Agri Disc Hubs use a high-performance lubricant developed by NSK specifically for conditions of this kind.

Figure 3: Tested using a water jet for 200 hours. At the end of the test, there was no sign of water having penetrated the cassette seal.

Product advantages: the Agri Disc Hub

Nomenclature

Advantages for machine manufacturers:

Factor	Description	Savings
Development	In addition to standard ranges, NSK offers solutions for specific customers and applications. The machine manufacturer does not need to invest in in-house development.	Engineering capacity, development costs
Testing	Thanks to NSK's experience and core specialisms such as seal technology, bearing design and the development of bearing assemblies there is no need for extensive tests on individual components and assemblies. The use of tried and tested technology provides additional safeguards.	Engineering capacity, test benches – in some cases for individual components as well – field testing
Procurement and logistics	Clients source a complete solution. There is no need for different suppliers and individual components to be audited and approved. Storage and materials planning for these individual components is also eliminated.	Purchasing and procurement capacity, storage
Assembly	There is no time-consuming assembly of various individual components: the Agri Disc Hub is mounted straight to the machinery.	Assembly time
Guarantee	Defect analyses, diagnostics, etc. become superfluous.	Defect analyses, repairs, guarantee

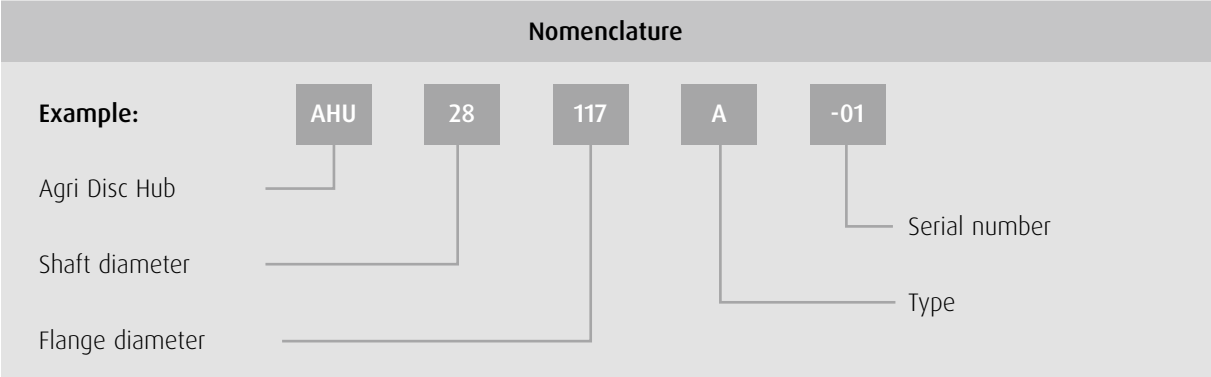

Advantages for farmers:

Factor	Description	Savings
Productivity	No need for repairs due to bearing failures caused by insufficient lubrication and contamination. This increases the machinery's availability.	Downtime, spare parts, repair service
Contamination	Field tests have proved that the cassette seal developed specially for the NSK Agri Disc Hubs provides reliable protection from contamination such as clay, sand, dust, plant fibres, liquid manure and other fertilisers, water and moisture ingress. The cassette seal is also protected from stones by a steel disc.	Bearing failures caused by contamination (increases service life by between five and ten times*)
Lubrication/grease	NSK Agri Disc Hubs are sealed bearing units with lifelong lubrication. This means there is no need for regreasing.	Saves time and prevents grease leakage in the field (saves approx. 25 kg of lubricant a year and approx. ½ hour per day of use, depending on the machine*)

* All figures are the result of field tests in close collaboration with customers and internal investigations.

NSK currently makes Agri Disc Hubs for disc diameters of up to 800 mm. Various flanged and shaft types are available.

The product range is constantly being expanded in close collaboration with our customers. Bespoke solutions can usually also be developed without any problems.

Customer request:																							

* The disc diameters provided only serve as a point of reference because the suitability of the Agri Disc Hubs depends to a large extent on the application and operating conditions.

Examination following field testing

Special bearings for the agricultural sector

Typical picture of a compact disc harrow covered in dirt following the use of liquid manure.

An NSK employee removing the unit from the machine arm.

The picture shows that no contamination or rust is present beyond the o-ring.

No dirt was able to get through the cassette seal. The seal is in outstanding condition.

Once the bearing had been dismantled, no dirt was found inside the bearing or in the lubricant.

There is no sign of damage or wear to the raceways.

Result of the examination:
Although the Agri Disc Hub bearing unit was used in extreme operating conditions in a compact disc harrow incorporating liquid manure, the bearing showed no signs of contamination, damage or wear. The Agri Disc Hub – and therefore the compact disc harrow – could have remained in use with no problems at all.

*Fieldtest 3.000ha

In addition to standard bearings, there is great demand for special bearings tailored to customers' specific needs or certain applications, especially in agriculture. NSK's Neuweg site in Germany specialises in bespoke solutions of this kind, which are produced alongside the standard ranges of double-row ball bearings, rollers and take-up units.

Ultra-sealed take-up units

204-DLS	20	47	14	17.7	12.80	6.60

NSK offers a wide range of ultra-sealed and application-optimised take-up units. The bearings are available with a single- or double-lip seal made from a special material which is extremely abrasion-resistant. The seals are also protected by a sheet metal cover. Field tests have shown that NSK bearings can last several times longer than comparable standard take-up units.

- › Various seal options
- › Combination of lip seal and shield on request
- › In addition to the standard options of a cylindrical or spherical R 500 mm outer ring, other radii can be supplied at the customer's request

In addition to double-row support rollers from the standard Neuweg product portfolio, NSK offers single-row support rollers with a cylindrical or spherical outer diameter. As well as the standard radius of 500 mm, customised special solutions with spherical outer rings can be supplied. Furthermore, NSK offers support rollers with shields "ZZR", lip seals "RSR" or a combination of a lip seal and shield "S03" on request to provide the bearings with ideal protection from even the dirtiest of operating conditions.

* Load ratings calculated as ball bearings

Special bearings for the agricultural sector

Gage Wheel bearings

Part no.: 3203B-2WDRTNGB016

Description: Extra wide double-row angular-contact ball bearing with a radial shaft seal

Load ratings: C: 14.6 kN
C₀: 9.0 kN

Use: Cylinders, wheels, rollers, etc

Double-row angular-contact ball bearing

Part no.: 3204BRSRWDRB26TNG

Description: Double-row angular-contact ball bearing with a radial shaft seal on one side

Load ratings: C: 19.6 kN
C₀: 12.5 kN

Use: Sowing machines, strip tilling, tilling in general

Four-point contact bearing

Part no.: QJ6204S03LSLB-1

Description: Four-point contact bearing with an extended inner ring, various special seals and a flinger on one side

Load ratings: C: 20 kN
C₀: 12.7 kN

Use: Sowing machines, strip tilling, tilling in general

Flanged bearing

Part no.: 96080209

Description: Flanged bearing with a higher load rating, a triple-lip seal and a flinger

Load ratings: C: 81.7 kN
C₀: 51.85 kN

Use: Tilling

Roller

Part no.: 900027200

Description: Roller with a shield, a radial shaft seal on one side and a stainless steel inner ring

Load ratings: C: 10 kN
C₀: 6 kN

Use: Field choppers

Take-up unit with a sheet metal flange

Part no.: PA204-2S03TNGB06

Description: Take-up unit with a hexagonal bore and a galvanised sheet metal flange

Load ratings: C: 12.7 kN
C₀: 6.55 kN

Use: Sowing machines, combine harvesters

Disc harrow bearings
PDNF and DNF series
PDF and DF series for square shafts

Disc harrow bearings from the Self-Lube® series are also often used in agricultural machinery. The bearings are produced under the RHP brand and come in a wide range of sizes and designs, including round and square bores. Because of the tough operating conditions they are exposed to, disc harrow bearings are supplied with a special triple-lip seal made from nitrile rubber reinforced with steel.

Bearings for powertrains/gears

TM Series - Deep groove ball bearing with special seal

NSK also offers tailored bearing solutions for powertrains and gears.

TM series – deep-groove ball bearings with a special seal
NSK’s TM series is a range of deep-groove ball bearings which have been optimised for use with oil lubrication by adding special seals. The seal ensures that the oil flows through the bearing via a defined slit which prevents foreign bodies from entering the bearing

- Features:**
- › The seal stops dirt particles from getting into the bearing while allowing oil to enter
 - › Less friction than with conventional contact seals
 - › Sealed-in grease with a high affinity for gear oil to aid initial lubrication

Bearing series: The major dimensions are the same as for the standard deep-groove ball bearing series 62 and 63.

HR series – high-load deep-groove ball bearings
The HR series provides excellent performance in a wide range of applications.

- Features:**
- › Higher load ratings and longer lifetime
 - › The major dimensions are identical to those of standard bearings
 - › The ball diameter and quantity have been optimised

Creep-Free Bearing series
These bearings have two O-rings mounted in the outer ring to prevent creep.

- Features:**
- › O-ring stop the outer rings from creeping
 - › Assembly is easy thanks to loose tolerance
 - › Very little wear occurs on the bore surface of the housing, making reuse possible
 - › The bearings can be used in existing housings because the dimensions are identical to those of standard bearings

Example:

HR

6305

C3

High-load series

Basic number

Internal clearance

NSK’s high-load deep-groove ball bearings (HR series) can significantly increase your application’s service life. This goes hand in hand with a substantial reduction in servicing and repair costs.

- Product features

 - › High load ratings (7% to 19% higher dynamic load ratings)
 - › Optimised internal design
 - › Pressed steel cage – larger rolling elements
 - › Wide range of sizes available, including sealed units
- Product benefits

 - › Longer life (22% to 68% increase based on ISO L10 calculation)
 - › Interchangeable with standard deep-groove ball bearings
 - › Possible reduction in bearing size

- Note on mounting Creep-Free bearings
- › When oil or grease is applied to the outer ring of the bearing, please use a mineral oil or a synthetic hydrocarbon oil (e.g. NSK’s EA2)
 - › Standard O-rings should only be used between –30 °C and 120 °C. Please contact NSK for advice on other operating conditions

Note 1: Although recommended fits are G6 or H7, G6 is recommended when used in conditions that prioritise insertion under a light preload.

Seal technology

Designing suitable seals is one of the most fundamental challenges when it comes to developing bearings for agricultural machinery. The inside of the bearing needs reliable protection from dirt, plant remnants, fertilisers and moisture. The seals even have to withstand pressure washers.

Here are a few examples of different seal concepts:

Cassette seal with a steel disc			
Protection from coarse dirt:	10	Bearing types:	Bearing units
Protection from dust:	10	Seal speed capability	4
Protection from water:	10	Applications:	Disc harrows, sowing machines
Grease retention:	10		

Triple-lip seal with a packing disc			
Protection from coarse dirt:	9	Bearing types:	Four-point bearings etc.
Protection from dust:	9	Seal speed capability	5
Protection from water:	9	Applications:	Sowing machines
Grease retention:	9		

Triple-lip seal with a flinger			
Protection from coarse dirt:	9	Bearing types:	Flanged bearing units
Protection from dust:	9	Seal speed capability	5
Protection from water:	9	Applications:	Tilling
Grease retention:	9		

Integrated radial shaft seal			
Protection from coarse dirt:	9	Bearing types:	Double-row bearings, rollers
Protection from dust:	9	Seal speed capability	8
Protection from water:	7	Applications:	Pressure rollers etc.
Grease retention:	7		

Double-lip seal			
Protection from coarse dirt:	9	Bearing types:	Rollers etc.
Protection from dust:	7	Seal speed capability	7
Protection from water:	6	Applications:	Tilling
Grease retention:	7		

Triple-lip seal reinforced with sheet steel			
Protection from coarse dirt:	9	Bearing types:	Four-point bearings etc.
Protection from dust:	9	Seal speed capability	5
Protection from water:	9	Applications:	Sowing machines
Grease retention:	9		

Single-lip seal with an adjacent flinger			
Protection from coarse dirt:	8	Bearing types:	Inserts
Protection from dust:	7	Seal speed capability	8
Protection from water:	7	Applications:	Mounted units
Grease retention:	6		

Single-lip seal			
Protection from coarse dirt:	8	Bearing types:	Inserts
Protection from dust:	7	Seal speed capability	8
Protection from water:	7	Applications:	Mounted units
Grease retention:	6		

Axial contact seal			
Protection from coarse dirt:	6	Bearing types:	Rollers etc.
Protection from dust:	7	Seal speed capability	9
Protection from water:	7	Applications:	Mounted units
Grease retention:	5		

Rating							
10	Very good	8	Good	6	Fairly good	4

						2	Poor
						1	Not suitable

Seal technology

Other bearings for agricultural applications

Comparison of the DU standard seal with the optimised DG seal for deep-groove ball bearings

DU standard seal

- › Dust resistance Good
- › Water resistance Good
- › Grease retention Good

Optimised DG seal

- › Dust resistance Very good
- › Water resistance Very good
- › Grease retention Very good

Reference bearings for the comparative test: 6303DDU/6303DDG

Dust test

Test conditions: Speed: 4,500 min⁻¹
Temperature: 80 °C
Dust composition: JIS 3kind test*, 400 g

Result: The bearings with the DDG seal last more than twice as long as the bearings with DDU seals.

Average running time (in hours until temperature suddenly rises)

DDU	58
DDG	133

Water jet test

Test conditions: Speed: 2,000 min⁻¹
Amount of water: 1 l/min
Duration of test: 2 hours

Result: There was no indication of water ingress in the bearing with the DDG seal

Increase in weight (mg)

DDU	112
DDG	0

Bearing series currently available with an optimised DDG seal									
Serie	00	01	02	03	04	05	06	07	08
60	DDG			DDG					
62		DDG	DDG	DDG	DDG			DDG	DDG
63			DDG	DDG	DDG	DDG	DDG	DDG	

* JIS 3kind test: quartz sand with an average grain size of 5 µm is stirred up in a box. The bearing rotates at a speed of 4,500 min⁻¹ in this box.

Bearings
Deep groove ball bearings, cylindrical roller bearings, tapered roller bearings and spherical roller bearings in ISO standard dimensions for various applications

Double-row standard ball bearings and special ball bearings
Standard ball bearings, modified to suit or special solutions designed from new

Ball bearing units
Cast iron, pressed steel and polymer housings in various designs to ISO and JIS standards, with bearing inserts to suit

Increasing efficiency – with AIP, the value-added programme from NSK

Incorrectly applied or selected bearings can lead to anything from a reduction in machine performance to failure of an entire system. We support you in solving these technical problems. The value-added programme AIP incorporates a comprehensive service package which enables you to design both productive operation and maintenance processes with increased efficiency and consequently better profitability. With AIP, you reduce your costs at every value-added stage.

Concentrated knowledge, many years of experience

Thanks to their in-depth technical knowledge and industry know-how, the experienced NSK application engineers are able to identify profitability potential and recommend appropriate measures. Our experts work according to a procedure which has been tested in practice and standardised – the value cycle. The ideally coordinated solution for your application is developed in close cooperation with them.

AIP services made to measure

The comprehensive range of AIP services is purposely designed to enhance efficiency and competitiveness. Your NSK expert will advise you about which measures can be derived from the examination results and will support you in implementing them. An app developed specially by NSK helps to collect data quickly on site and to perform calculations. Another app presents success stories from various branches of industry.

AIP NSK Solutions

Example success stories show how profitability and reliability can be increased using tried and tested practices.

Cost Saver App

The cost savings calculator app enables potential cost savings to be calculated rapidly.

- › Stores Survey
- › Workshop Survey
- › Process Map
- › Bearing Cross Referencing

- › Application Reviews
- › Machine Design Support
- › OEM Part Conversion
- › Diagnostics

- › Product Training
- › Application of NSK Bearings
- › AIP Training
- › Industry Specific Training

- › Bearing Condition Analysis
- › Failed Bearing Analysis
- › Lubrication Analysis
- › Material & Dimensional Analysis

Discover how you can increase your profitability with the help of our value-added AIP programme and our high-quality products. We will be pleased to send you our complete AIP brochure or contact you personally. Please email your enquiry to us at: aip@nsk.com
