

ROLLING BEARING TRAINING COURSE

SETTING THE RIGHT COURSE FOR EVERYONE

Rolling bearing knowledge with practical
workshop skills

WHY SHOULD WE DO TRAINING

Tough competition from local and overseas markets has forced our industries to improve their output rates and quality whilst reducing operational and maintenance costs. It is estimated that two thirds of the rolling bearings still prematurely fail due to poor maintenance and fitting practices, resulting in unnecessary higher maintenance expenditure, poor plant reliability and increased downtime.

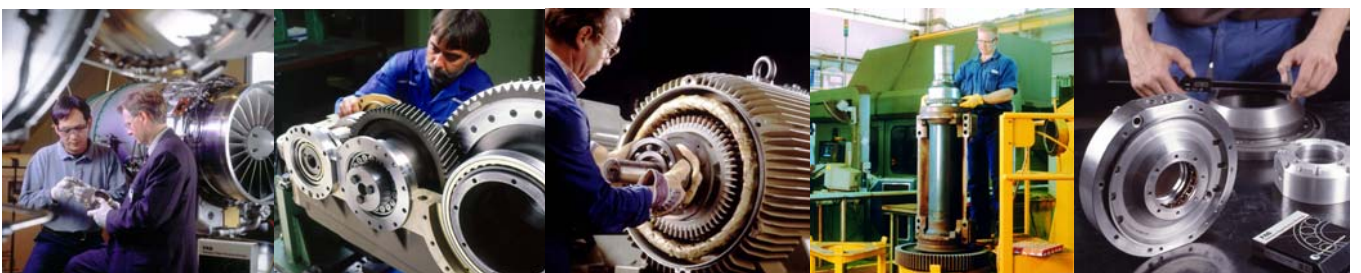

THE SOLUTION

In most cases the unexpected failures could have been prevented if the personnel responsible for the plant production and maintenance were aware of the fundamental mistakes that were regularly being overlooked or ignored.

To resolve the common mistakes associated with rolling bearings and the surrounding components, FAG has developed this two-day workshop that focuses on the basics of Rolling bearing knowledge and Practical workshop skills that are required by the Workshop, Maintenance, Engineering personnel.

The training is conducted by experienced rolling bearing specialists, who have gained their knowledge through involvement in problem solving in various industries.

Do It Right, The First Time

TRAINING CONTENTS

Consisting of:

- Rolling Bearings
- Bearing Arrangements
- Design of Mating Parts
- Lubrication of Rolling Bearings
- Maintenance & Monitoring
- Mounting & Dismounting of Rolling Bearings
- Practical Exercises

BENEFITS OF TRAINING

Savings \$\$\$

Savings \$\$\$

Savings \$\$\$

- Increased Equipment Availability
- Increased Production
- Increased Efficiency
- Reduced Downtime
- Reduced Production Loss
- Reduce Expenditure
- Better Utilisation of Workforce
